

# *Dangerous Animals*

Hello everyone, my name is Effie. Today I'm going to talk about animals.

# Why are lions dangerous ?

Lions are dangerous because they have sharp teeth and big bodies. They can run very fast. They live in the plains and they are good at hunting. You have to be careful in the plains because they could eat you.

# Why are hammerhead sharks dangerous?

Hammerhead sharks are dangerous because they can hunt people. They have sharp teeth and can swim very fast. Hammerheads are aggressive hunters, feeding on smaller fish, octopus, and squid, but won't attack people unless provoked.

# Why are alligators dangerous ?

Alligators are dangerous because they have big teeth. If they bite, you could die. They can swim faster than you. They are good at hunting. You need to be careful because if you make them angry they can kill you .

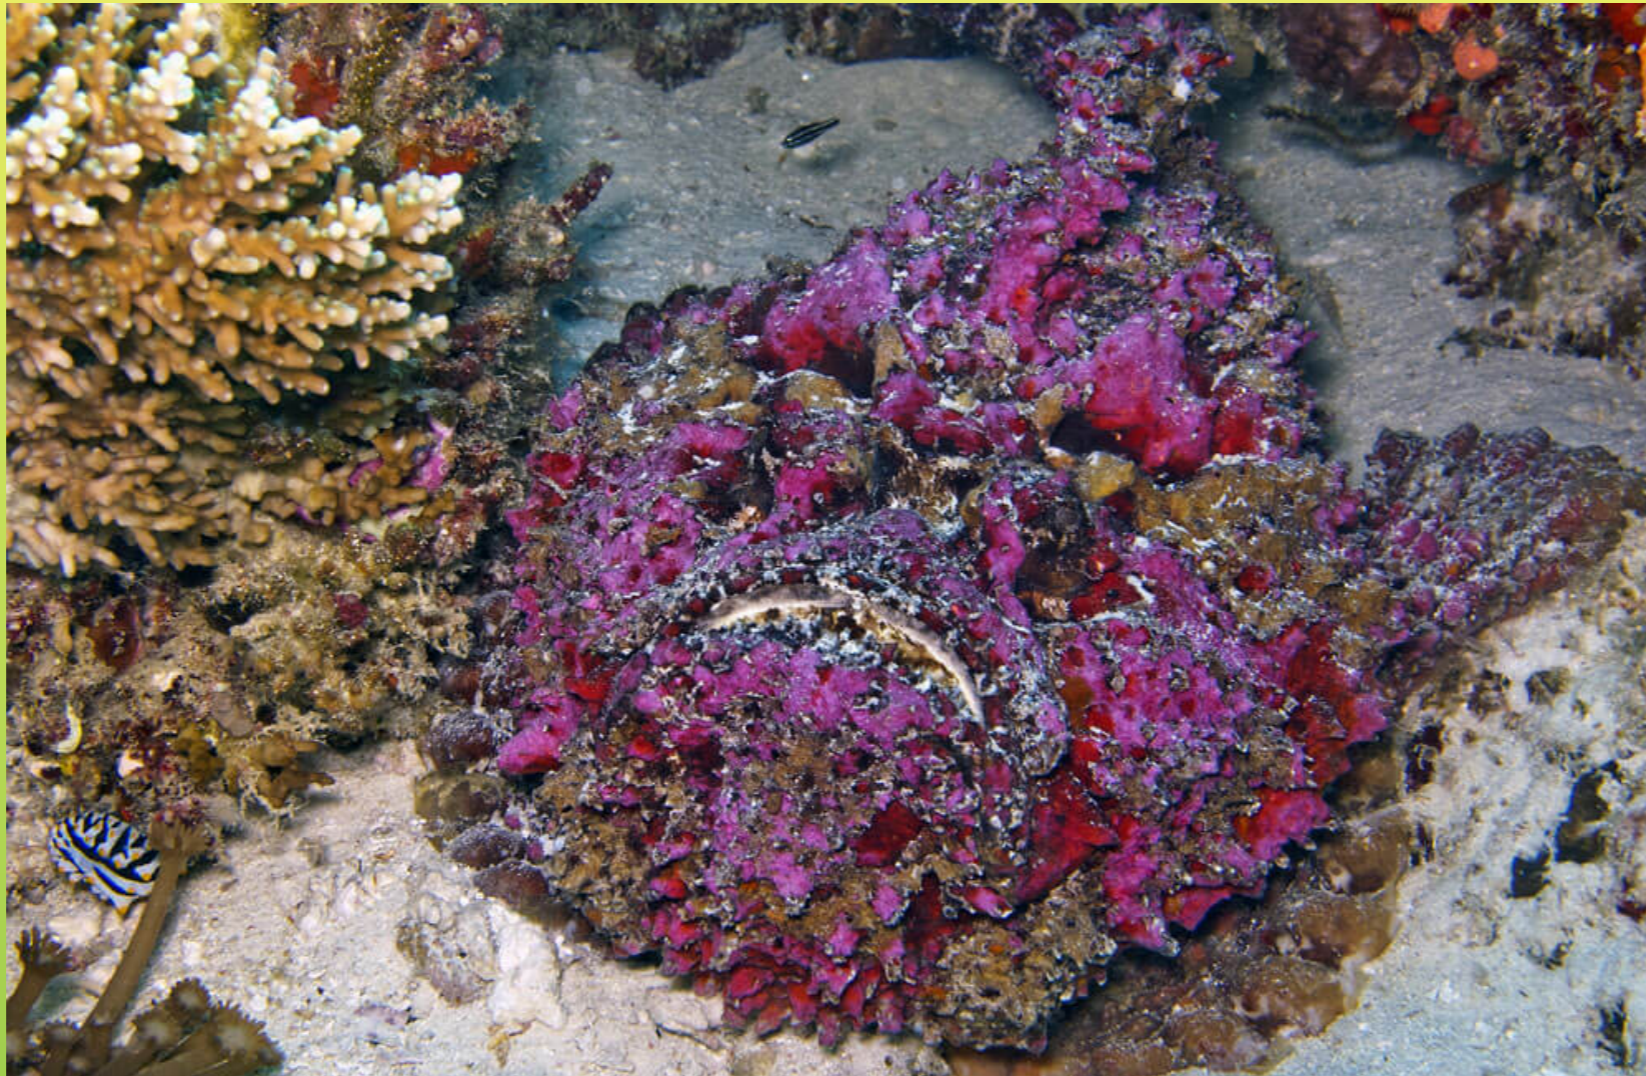

# Why are hippos dangerous?

Hippos are dangerous because they have huge bodies and they can step on you. They enjoy taking a bath. They live in rivers, lakes and the jungle. They can run very fast, and can reach up to 55 kmh. They also have sharp teeth, so if they bite you, you could die.

# Why are stone fish dangerous?

Stone fish are dangerous because they can inject venom that is capable of killing an adult person in less than an hour. They live in the ocean and they are good hiding. You need to be careful because if you touch them, you could get hurt.

# Why are rhinos dangerous?

Rhinos are dangerous because they have sharp horns. They can run very fast, are very large, and are good at hunting. You need to be careful because if they use their horns to hit you, they could break your bones.
