

Dangerous Animals

By Hanny

Hello!

Polar Bears

Polar Bears are giant white bears. They are the largest land predators in the world. They can weigh up to 1500 pounds and are twice as large as a lion. Polar Bears can be up to 10 feet long. They can swim very fast. You have to be careful because they might eat you!

Great White Sharks

Great White Sharks are dangerous because they have big, sharp teeth, and they can swim very fast. They live in the Atlantic and Pacific Oceans, Australia, New Zealand, and Africa. They are good at hunting which means they are most dangerous sharks in the oceans. Great White Sharks are the largest and most fierce predators in the oceans.

Elephants

Elephants are the biggest land animals in the world. Elephants are respected and revered by people throughout Africa and South Asia. They are also feared because they can be aggressive and dangerous. If an elephant charges at you, they can stab you with their sharp tusks, or stamp with their big feet.

Lion Fish

The Lion fish is a beautiful and interesting looking fish with long spines, flashy fins, and bright stripes. Lion fish are good hunters. They don't actually use their venomous spines to hunt.

Cheetahs

A cheetah is a large cat and is known for being the fastest of all the land animals. It can reach speeds of up to 70 miles per hour. The cheetah can accelerate from 0 to 60 in around 3 1/2 seconds. This is faster than most sports cars.

Stingrays

Stingrays are dangerous because they have poisonous barbs. Stingrays generally do not attack people or defend themselves. When threatened or scared, they will just swim away. People usually get hurt because they step on stingrays by accident, but people have been killed.

Thank you for listening!

Goodbye
