

# How?

## Going Green

By Aliyah

# How do you make your house green?

Put solar panels on the roof to generate electricity from sunlight. They can save you more money and save the Earth, too!

Plants help to clean the air of pollution, so by introducing more plants into your home, you will improve the air quality.

# How do you make your house green?

A thermostat can be programmed to keep a house at a constant warm temperature. In Taiwan we do not have many thermostats, because it's too hot. We usually don't need thermostats, we often use air conditioning (AC).

You can use furniture made from recycled materials such as wood or plastic. It looks good, it's cheap, and it's better for the environment.

## How do you make your house green?

Use cloth towels or napkins instead of ones made from paper. Then you don't need to buy so many tissues and paper towels. Research shows that the average person uses 57 sheets of tissue. One sheet of tissue costs NTD 0.048, so one person spends almost NTD 3 for tissue per day. Per year you will be spending NTD 974.

This picture shows a slow-flow faucet. It can release water slowly so it won't waste so much water. It also reduces the amount needed for washing and showering. You can put them in your kitchen or bathroom.

# How do you make your house green?

Replace regular incandescent light bulbs with CFL (compact fluorescent light) to save energy. It's brightness is instant and it's lifespan is longer, too.

Regular filament bulb

Energy saving CFL bulb

Two-stage flushing toilets can cut down the amount of water used for each flush. "Two stage" means that there will be two buttons for flushing the toilet. It can reduce the amount of water wasted which saves you money and it's better for the environment.

SAVE ENERGY 

Thanks for listening to my presentation. I hope you enjoyed it.

**Save Water – Save Earth.**
